

ENVIRONMENTAL POLICY

David Morley Architects recognise that as architects, our particular environmental influence extends to the buildings and environments we design, as well as covering those aspects within our direct control, in the running of an architectural practice and its premises.

This policy covers the latter aspects; please see our separate Corporate Social Responsibility and Sustainable Development Policy for details of our environmental approach to design.

Our environmental footprint arises from our business activities associated with running and maintaining our office workplace and the provision of architectural services.

Our environmental impacts include energy and water use, land use, air emissions, transport use, waste generation and resource consumption in the procurement of associated goods and services.

We are committed to carrying out our operations in a way that minimizes our adverse environmental impacts. The practice aims to continually review and improve our environmental performance wherever possible.

We will achieve this by:

- Meeting or exceeding all environmental legislation and codes of practice relating to our practice and taking into account anticipated future changes;
- Developing and implementing an externally audited environmental management system;
- Monitoring and reporting of our environmental impacts, setting targets for improvement and regular review of effectiveness of measures and practices in place;
- Raising awareness, encouraging participation and providing information and training to employees on environmental issues;
- Reducing and recycling our waste products and buying materials and resources from renewable or recycled sources;
- Taking necessary actions to prevent pollution and continually seek improvements;
- Actively promoting and communicating our environmental aims both internally and amongst our clients and suppliers;
- Championing socially and environmentally responsible solutions and innovative developments within our industry and profession.

We will provide adequate and appropriate resources to implement this policy. We view environmental management as a prime responsibility at all levels within the practice and encourage everyone to contribute to achieving this objective.

SUSTAINABLE DESIGN POLICY

David Morley Architects recognise that as architects, our particular environmental influence extends to the buildings and environments we design, as well as covering those aspects within our direct control, in the running of an architectural practice and its premises.

This policy covers the former aspects; please see our separate Environment Policy for details of our environmental approach to or office management.

David Morley Architects is committed to developing for our clients robust building design solutions that are ecologically and environmentally considerate, use resources efficiently over their lifetimes and minimise adverse environmental impacts.

We aim to take into account the economic, social and environmental aspects in sustainable design and promote best practice in design, construction, use and maintenance of the buildings we are involved in.

The practice promotes understanding of environmental issues in design practice throughout David Morley Architects, both at the level of individual's impacts within the workplace and in the design of buildings and aims to continually review and improve the environmental performance of our designs

We will achieve this by

- Meeting or exceeding all environmental legislation and codes of practice relating to our architectural work and taking into account anticipated future changes
- Developing and implementing an externally audited environmental management system
- Monitoring and reporting of our environmental impacts, setting targets for improvement and regular review of effectiveness of measures and practices in place
- Raising awareness, encouraging participation and providing information and training to employees on environmental design issues;
- Reducing and recycling our waste products and buying materials and resources from renewable or recycled sources
- Designing buildings in a way that helps to prevent pollution and continually seek improvement to enhance low impact building design
- Actively promoting and communicating our environmental aims both internally and amongst our clients and suppliers
- Championing socially and environmentally responsible solutions and innovative developments within our industry and profession.

We will provide adequate and appropriate resources to implement this policy. We view environmental management as a prime responsibility at all levels within the practice and encourage everyone to contribute to achieving this objective.
