

ENVIRONMENTAL POLICY

David Morley Architects are signatories to Architects Declare. We recognise that, as architects, our environmental influence extends to the buildings and environments we design, as well as covering those aspects within our direct control, in providing and maintaining workspace for an architectural practice.

This policy covers the latter aspects; please see our separate Sustainable Design Policy for details of our environmental approach to our design process.

Our environmental footprint arises from our business activities associated with running and maintaining our office workplace and the provision of architectural services.

Our environmental impacts include energy and water use, land use, air emissions, transport use, waste generation and resource consumption in the procurement of associated goods and services.

We are committed to carrying out our operations in a way that minimizes our adverse environmental impacts. The practice aims to continually review and improve our environmental performance wherever possible.

We will achieve this by:

- Meeting or exceeding all environmental legislation and codes of practice relating to our practice and considering anticipated future changes.
- Developing and implementing an externally audited Environmental Management System.
- Monitoring and reporting of our environmental impacts, setting targets for improvement and regular review of effectiveness of measures and practices in place.
- Raising awareness, encouraging participation, and providing information and training to employees on environmental issues.
- Reducing and recycling our waste products and buying materials and resources from renewable or recycled sources.
- Taking necessary actions to protect the environment, prevent pollution and continually seek improvements.
- Actively promoting and communicating our environmental aims both internally and amongst our clients and suppliers.
- Championing socially and environmentally responsible solutions and innovative developments within our industry and profession.

We will provide adequate and appropriate resources to implement this policy. We view environmental management as a prime responsibility at all levels within the practice and encourage everyone to contribute to achieving this objective.
